BEVELLED GLASS PROCESSING DISCLAIMER

4th October 2023

Please Read Carefully Before Proceeding with Your Order

At Tough Glass, we take pride in sourcing and providing quality bevelled glass products for our valued customers. It's essential to be aware of certain characteristics and industry standards regarding bevelled glass.

Edgework: Glass edges may exhibit variations in precision due to the nature of glass processing and machine restrictions. It is important to note that perfect edgework is not always achievable in glass processing, and industry-accepted tolerances apply.

Corner Alignment: We are aware that one of the most common concerns raised by customers pertains to the alignment of the corners in bevelled glass products. It's important to understand that achieving perfectly aligned corners can be challenging in glass processing and we cannot guarantee meeting this requirement.

We recommend assessing glass under natural daylight conditions, standing at a distance of not less than 1 meter, with a viewing angle ranging from 30 degrees to 90 degrees, to ensure accurate visual evaluation.

We are committed to providing the best quality products and services to our customers. If you have any questions or concerns regarding processing of bevelled edgework, please do not hesitate to contact us.

By placing an order with Tough Glass, you acknowledge and accept these standards and tolerances regarding bevelled glass.
